Mierzęcin Palace – a saved monument	34-35

Poland's largest MANUFACTURER of varnish product solutions.

THE TOOLS,
used to produce
the first putty
in a home-made
process.

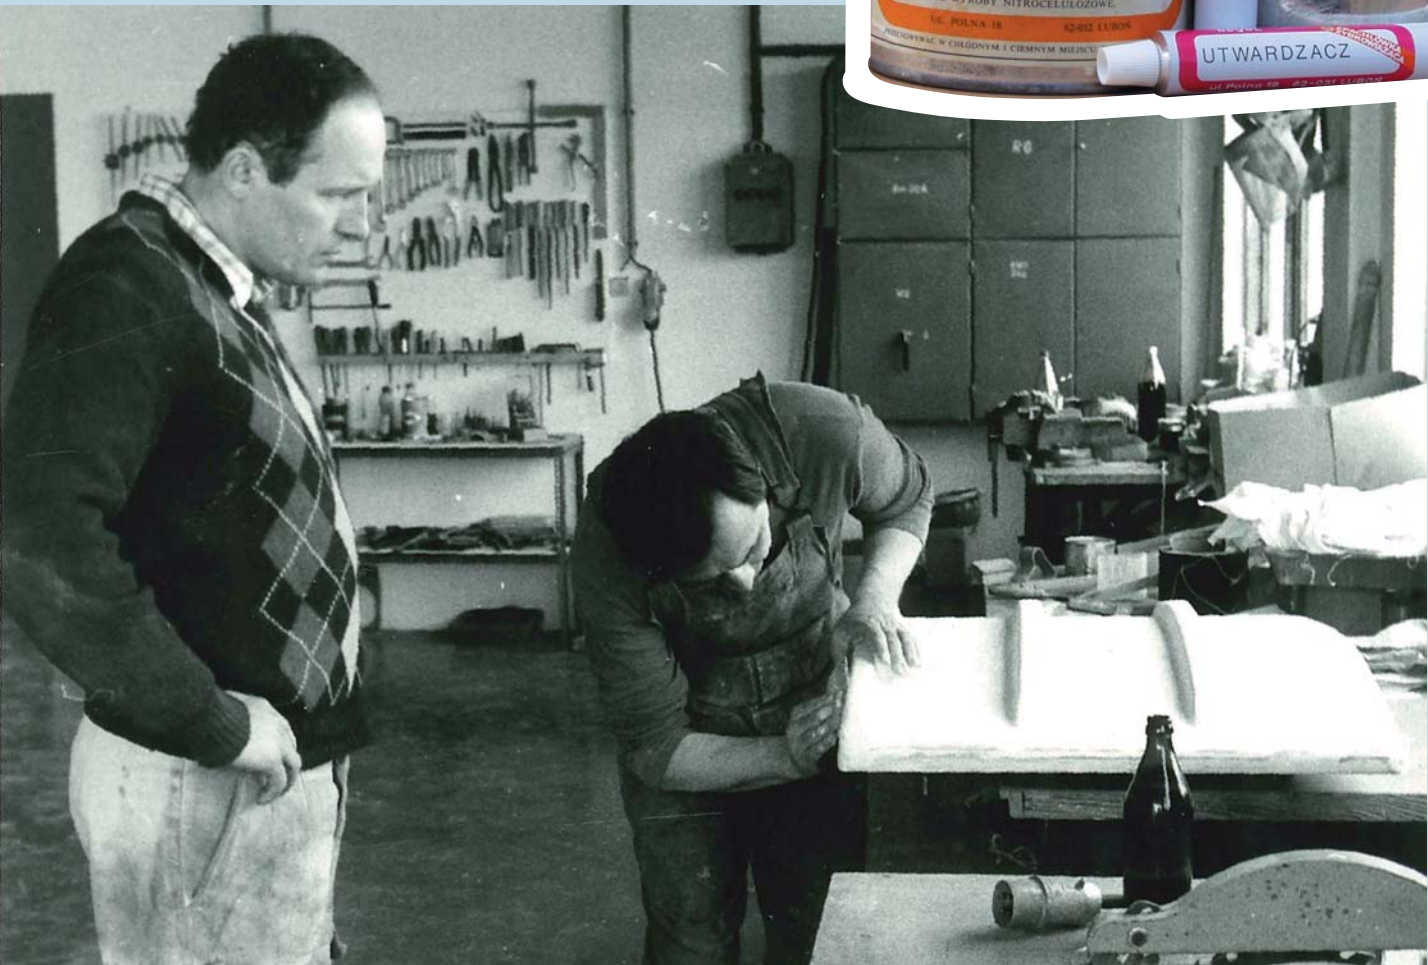

The history of NOVOL begins in a small workshop of only 90 square metres, where a modest assortment of products, all made with manual tools, satisfied the demands of the local market. We are proud to say that the company established in 1978 by Mr. Piotr Olewiński and Mr. Piotr Nowakowski has become the largest Polish manufacturer of painting solutions.

The first NOVOL premises

NOVOL

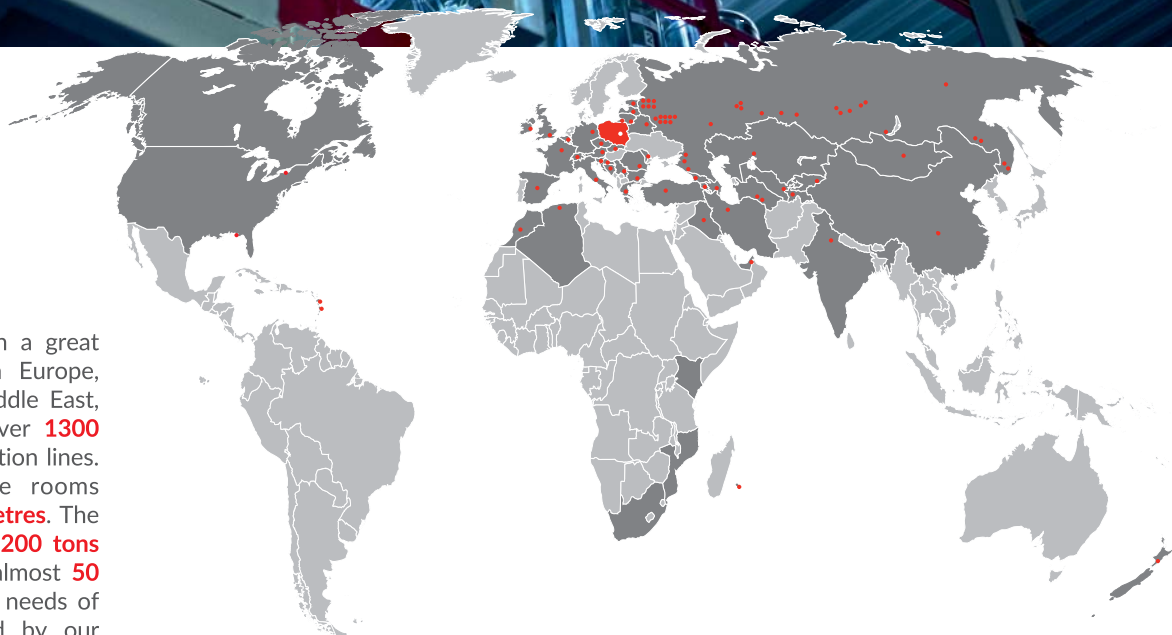

in numbers

EXPORT DESTINATIONS almost **50** countries

EXPORT VOLUME **13 000** tons/year

PRODUCTION VOLUME **18 200** tons/year

NOVOL distributes products on a great scale to Western and Eastern Europe, Australia, New Zealand, the Middle East, and Africa. We manufacture over **1300** different products on 10 production lines. Our manufacturing and store rooms comprise over **17,000 square metres**. The annual production output is **18,200 tons** with **13,000 tons** exported to almost **50 countries** across the globe. The needs of specific markets are addressed by our trading partners in Germany, Russia, and Ukraine.

NOVOL for Classic Car

Industrial

Cobra

STP

Spectral 2.0

NOVOL manufactures products mainly for automotive varnish coating and thus provides end-to-end solutions for professional body painting shops. Throughout all the years of our business, we have been consistently expanding our range with high-quality products for assembly and repair operations in various industries: self-levelling flooring compounds for sports and industrial construction, shipbuilding materials, industrial materials, and products for classic car renovation.

RANGE

Non-Paint

Quattro

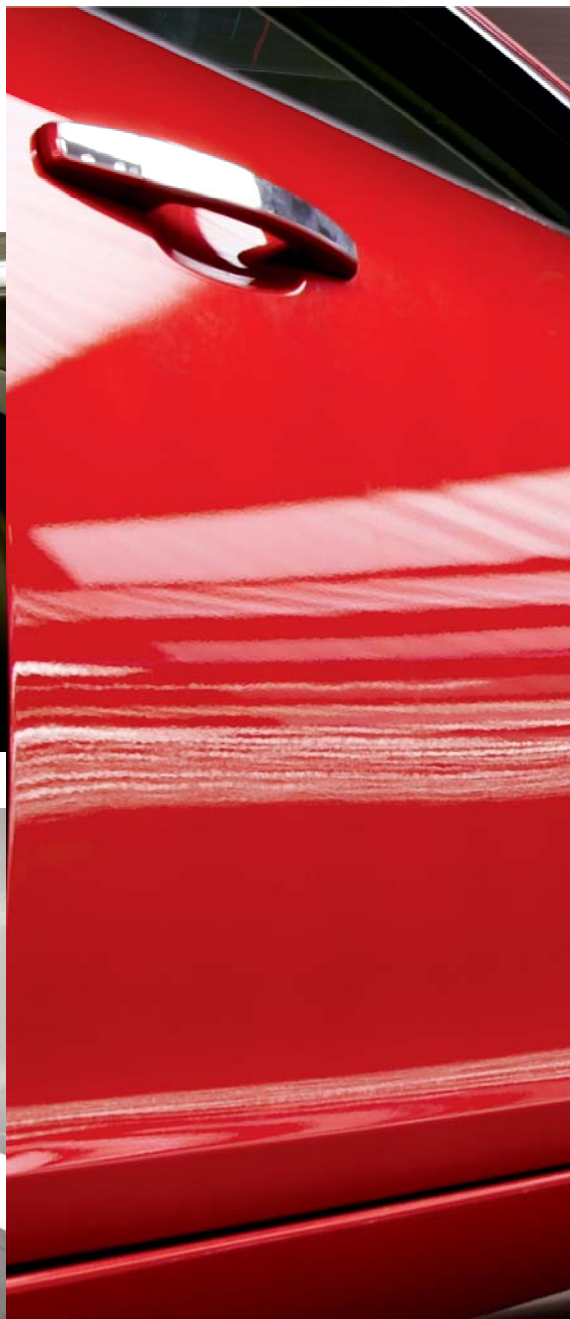

Nautic

Novofloor

PRODUCTION

PROFESSIONAL is a system of products for car refinishing. We offer a wide selection of products for renovation of paint coats: from universal putties with multiple uses, through special purpose putties to acrylic topcoats, clearcoats and primers, along with an entire range of supplementary products. Choosing the right materials enables spot repairs and large-scale repairs.

PROFESSIONAL

car refinishing

Feel the Color

Spectral 2.0 provides end-to-end processing systems for the best quality in finish and workmanship at every stage of the paint repair process. Spectral 2.0 is a technology that answers all problems at every stage of the paint coat repair process: from superior clearcoats, including Europe's renowned Spectral KLAR 565, to Spectral UNDER primers, putties with the proprietary Mixing Indicator, and color matching systems.

Every vehicle requires an individual approach, depending on the type of damage and the owner's needs. Spectral 2.0 tackles this problem with an entire range of repair technologies, including coating processes for new parts, old paint spot repairs, putty-filled body parts, and plastic details.

spray varnish coating products

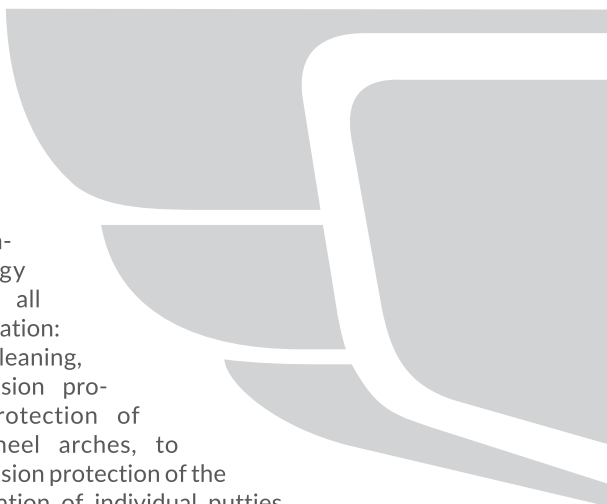

—NEW—
DESIGN

SPRAY is a line of high-quality spray products which formulas have been developed and tested at the NOVOL R&D Laboratory. The SPRAY products are for professional and DIY use, without the need for spray guns and air compressors. The extremely short drying time cuts down the time to complete the repairs. Moreover, the available fan nozzle produces a spray jet with application properties resembling the operation of a professional spray gun.

NOVOL for Classic Car

NOVOL for Classic Cars is the world's first product line dedicated exclusively for classic car renovation. It is a complete technology which supports all stages of renovation: from surface cleaning, initial anti-corrosion protection, and protection of chassis and wheel arches, to proper anti-corrosion protection of the body and application of individual putties, fillers, primers, and color and topcoat selection.

RENOVATION
of Classic Cars

INDUSTRIAL

solutions for industry

The special INDUSTRIAL Coating Systems line is addressed to industrial customers who manufacture buses, coaches, rail wagons, semi-trailers, special car bodies, agricultural machines and building machinery, steel structures, tanks, etc. INDUSTRIAL Coating Systems is a complete technology of industrial coatings which includes topcoats, anti-corrosion primers, putties and supplementary materials used both in light and heavy industry.

LIGHT ANTICORROSION SYSTEM

The Industrial Light Anticorrosion System is an end-to-end surface repair and renovation line. The Industrial Light Anticorrosion System is based on the Industrial Coating mixing system which can reproduce any colour from the RAL, BS and Commercial Transport palettes within minutes.

COBRA
TRUCK
BEDLINER

Cobra. Extreme protection

NOVOL

EXTREME

BEDLINER

COBRA Truck Bedliner – 2K polyurethane resin-based textured protective coat. Extreme mechanical strength, scratch and solvent resistance. Protects against adverse weather conditions, petrol, oil, water and salt. Sound-proofing and sound-dampening properties. Anti-slip finish.

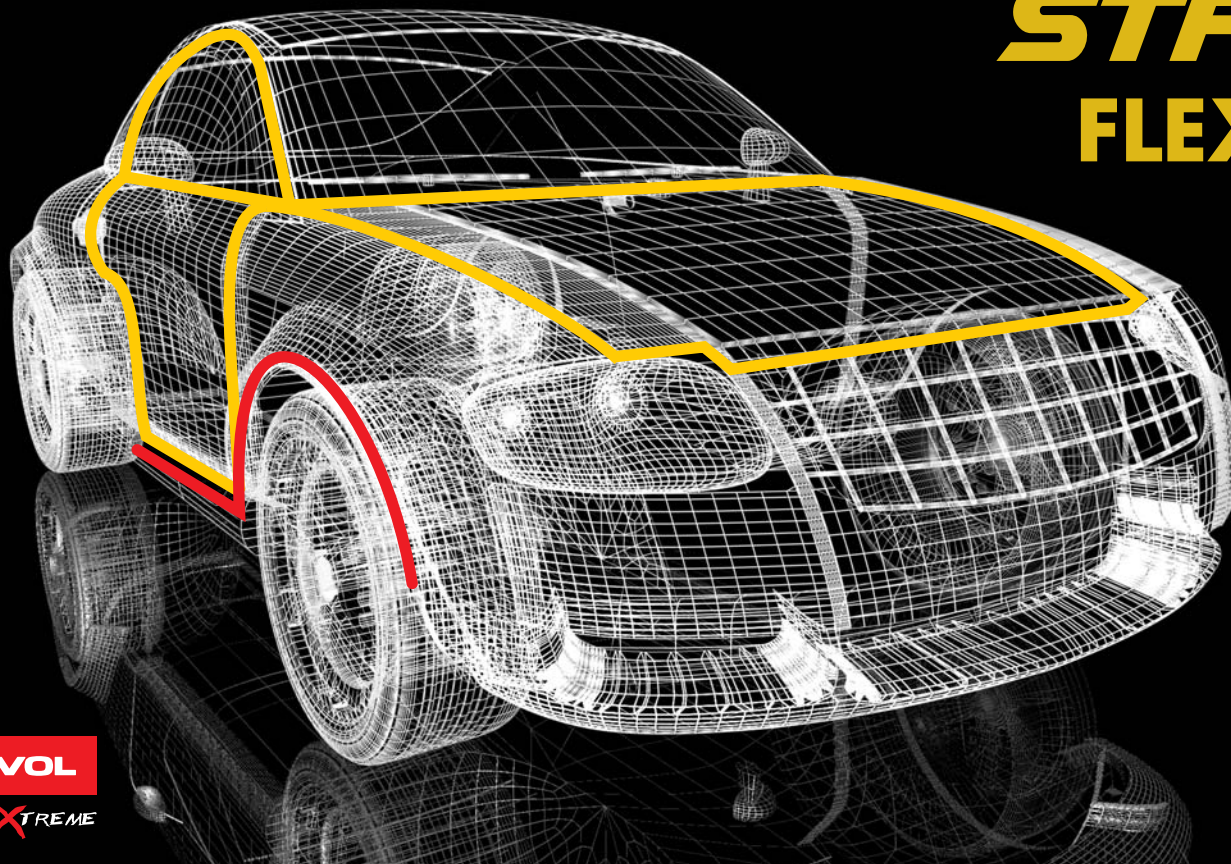

SPRAYABLE SEALANT

STP FLEX is an STP resin-based sprayable hybrid sealant. The product is intended for sealing and protection of overlapping and welded metal sheet joints of motor vehicle bodies and regeneration of OEM-deposited sealant textures.

The final texture varies with the specific gun nozzles from thin stripes to dashed.

STP FLEX

NOVOL

EXTREME

HIGH GLOSS FINISH

QUATTRO - the system's advantages include **LONGER DRYING TIME** of the **POLISHING COMPOUND**, which facilitates processing large surfaces, especially at high temperatures. What is also important is the speed and ease of polishing, and a hologram-free and lasting finish. The **QUATTRO** polishing system is very **USER-FRIENDLY**, highly efficient, quick to use, and ensures a great finish.

NOVOL

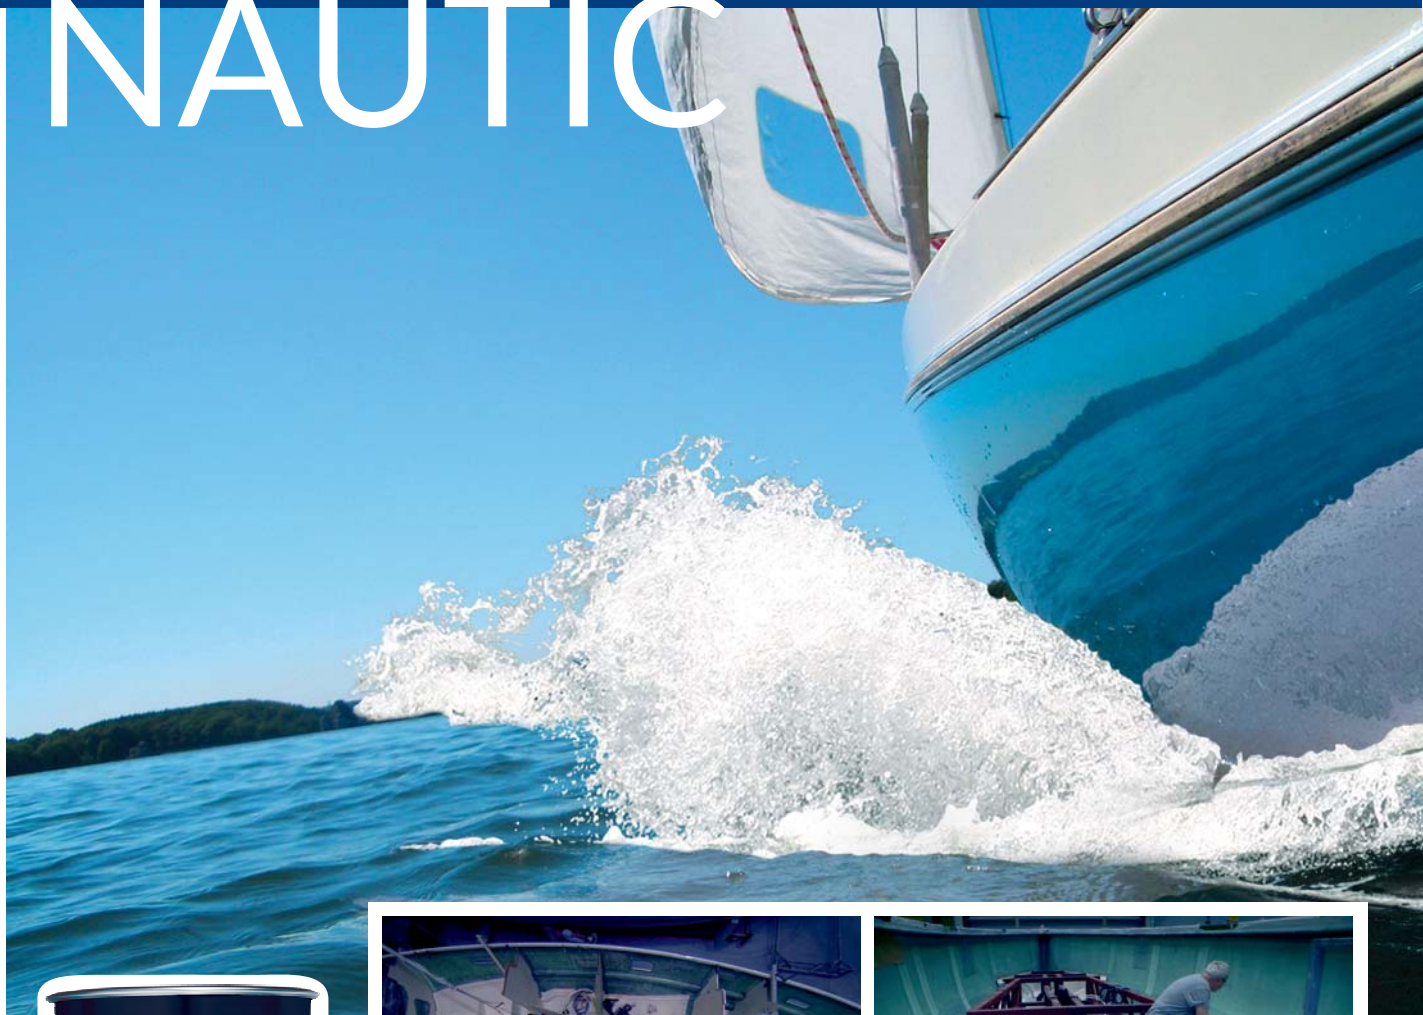

NON-PAINT

NOVOL aids are a careful selection of products indispensable in the daily work of car body and paint service providers.

This is **NOVOL NON-PAINT**: superior-quality products with an excellent yield and which are easy and convenient in use to reduce the work processing time to the minimum. This optimizes top-quality car body and paint repairs. NOVOL NON-PAINT are the aids every car body and paint shop needs.

NAUTIC

The **NAUTIC** boatbuilding product line is a wide selection of high-quality, dual-component assembly adhesives for joining and binding laminates, insertion of reinforcing details and sandwiching. The quality of the raw materials used in the NAUTIC line production makes the adhesive bonds made with the products very strong and highly resistant to overloading in the operation of boats and yachts – both in amateur and professional sailing.

NOVOFLOOR

NOVOFLOOR are polymer compound systems for the construction of floorings and pavements used in industrial, sports and recreation facilities with the highest strength characteristics achievable. Another advantage of the NOVOFLOOR systems is the absolute freedom in forming patterns and choosing surface colors to break the monotony of industrial settings. The outdoor pavements can also be built as permeable to water.

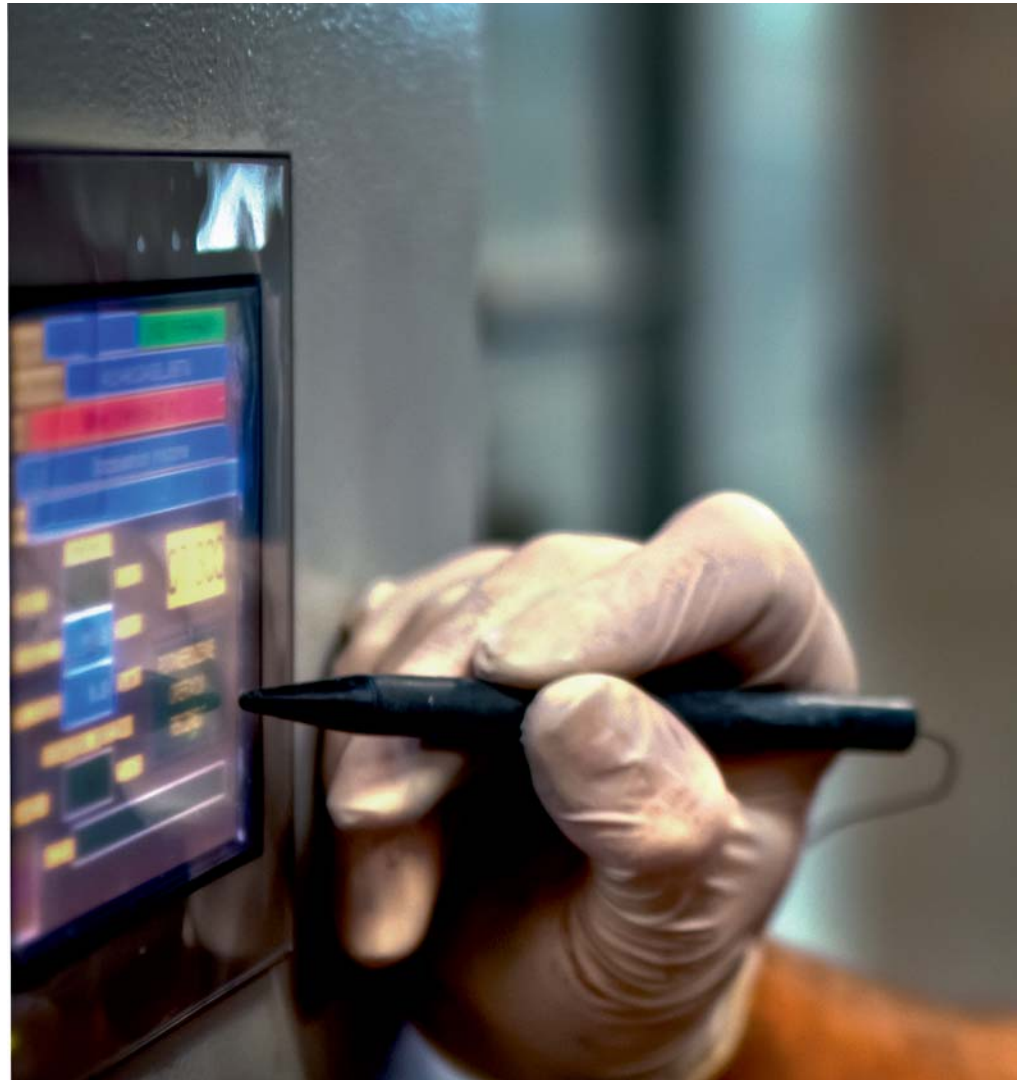

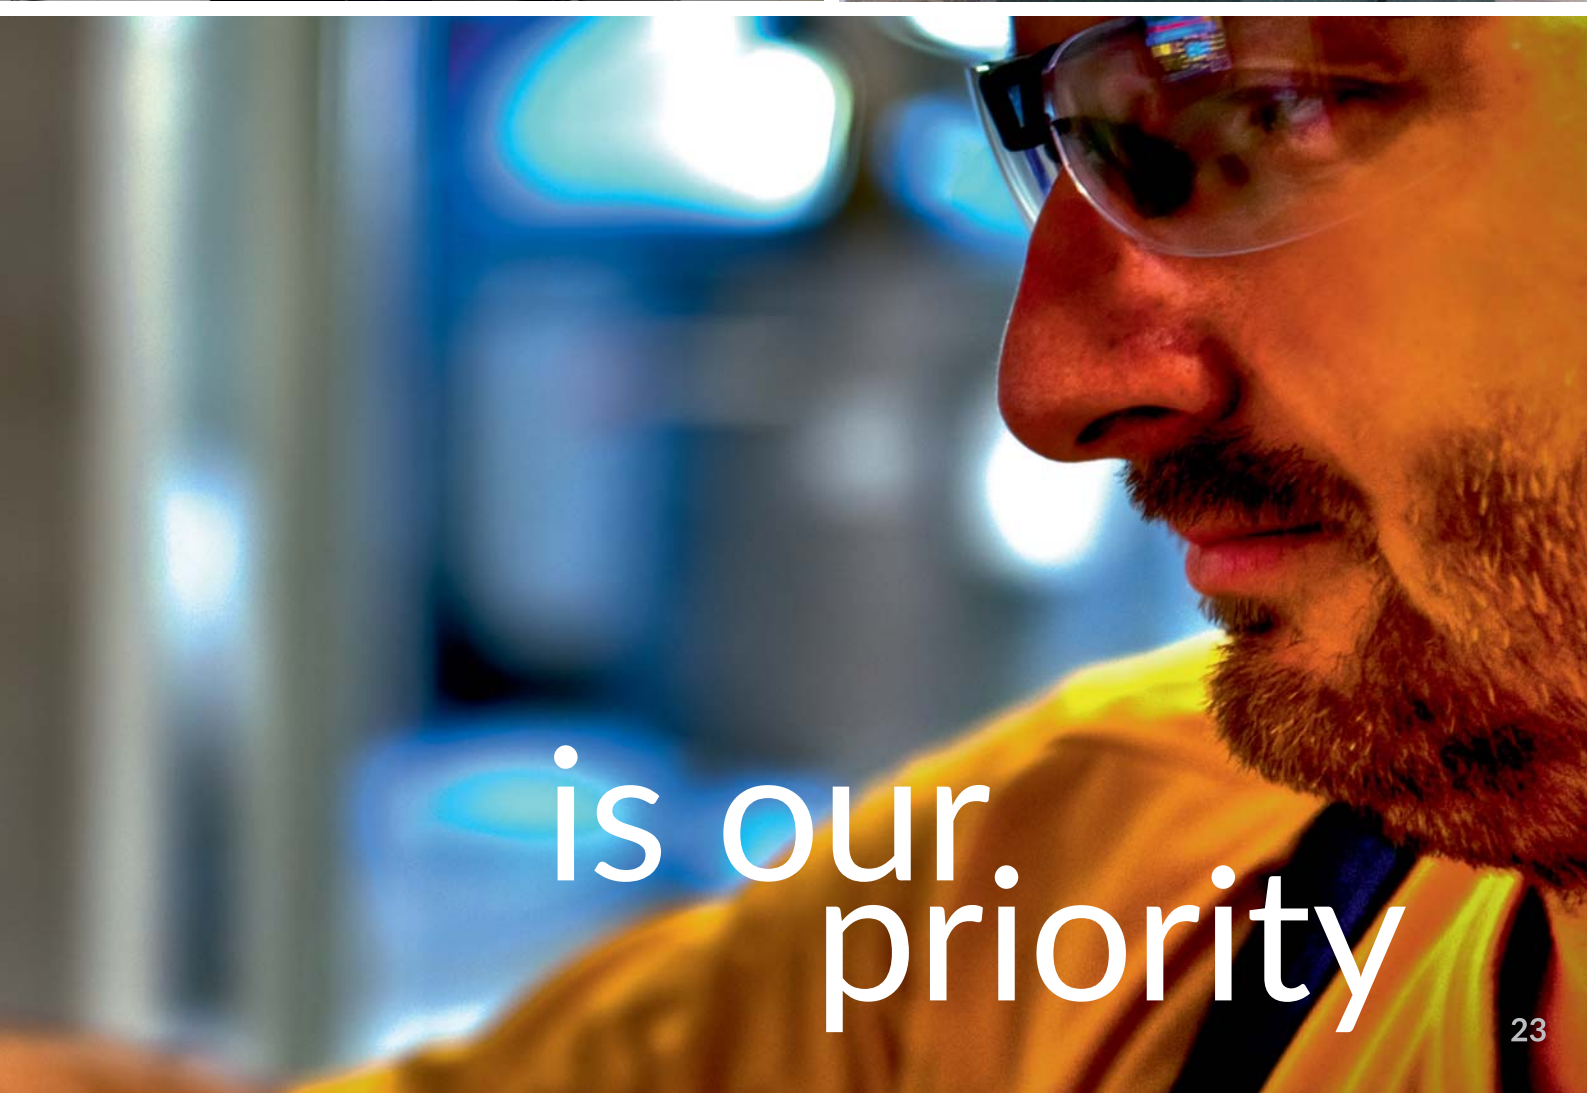

**INDUSTRIAL FLOOR SYSTEMS,
SPORTS SURFACE SYSTEMS**

QUALITY

The aim of NOVOL is care for the quality of its products. All our products are manufactured from high-quality materials in modern controlled processes. We have implemented an Integrated Quality Management System according to ISO 9001:2015. This is why we can guarantee that the products you receive have the same efficiency and effectiveness each time.

NOVOL for
DEVELOPMENT

NOVOL has its own Research & Development Laboratory, a modern advanced unit which continually seeks innovative solutions. It is staffed by a team of qualified and experienced specialists who do testing in automotive and industrial varnish manufacture, flooring and pavement systems, wood flooring chemicals, and boatbuilding chemicals. Their research work includes - development of formulas for products and their manufacture processing, mechanical testing (e.g. tensile strength, bending, shearing, impact resistance, hardness, etc.), - ageing testing (i.e. anti-corrosion tests in a spray salt chamber, UV resistance, etc.), and evaluation of application parameters and properties (e.g. adhesion to different types of substrates, penetration power, filling, texture, etc.).

The floor space of 2500 m² includes four lecture halls, the advanced R&D Laboratory, and the training paint shop equipped with a paint box and two pre-treatment zones.

NOVOL TRAINING CENTRE: caring for customers

NOVOL is particularly focused on improving work efficiency at painting shops. Hence, we provide training courses for painters and on-site presentations of our systems. Our numerous satisfied customers get their education at the NOVOL Training Centre. The students apply from Poland and both Western and Eastern Europe. We have an average of 5000 participants per annum. To meet customer demands, our Representatives and Technicians do system presentations at customer's locations. The personnel maintain relations with the customers and ensure the best quality of cooperation. Their duties include cost optimisation consulting and painting technology supervision.

NOVOL and the envi

We care for the natural environment and have implemented and certified our Environmental Management System according to the requirements of ISO 14001:2015. We also follow the Responsible Care international sustainability program. NOVOL is driven by sustainable growth, so it assures environmental safety and preserves the natural value of its surroundings.

ronment

NOVOL has contributed to promoting joint responsibility for the natural environment by building a heat regenerating converter: a device which not only limits VOC emission levels, but also enables using waste energy from industrial processing and combustion. This investment is a truly innovative, non-commercial enterprise, which does not generate profit upon completion: its sole purpose is to improve the condition of the natural environment and to reduce the nuisance to and negative impact of business on the environment.

NOVOL WITHOUT BARRIERS

employment for the disabled

Our care for social responsibility is represented by our department, Manu Service, which offers employment to the intellectually disabled, to those who have never worked before or to the unemployed. As a result, these persons have found a meaning to their life and the potential to rehabilitate through professional activity.

AWARDS AND DISTINCTIONS

Our efforts and activities have been recognised by independent organisations. We have been awarded the Economic Award of the President of Poland, in the category „Corporate Order” and „Social Responsibility of Business”. We have also been awarded the title of Entrepreneur of the Year, a ranking organised by Ernst & Young. This award is special to us, since it is given in recognition of excellent business responsibility and for understanding and helping the disabled. Other prestigious awards and honours include: Fair Play Company Pearls of the Polish Economy, Business Gazelle, Icebreakers, Polish Success, and Company of the Year.

Sports competition, passion and energy are close to our spirit. That is why NOVOL sponsors large sports events. We support the Polish Rally Championships events and competitors, including the rally duo of the TVN Turbo crew, Łukasz Byśkiniewicz and Maciej Wiślawski. We also cooperate with Polski Związek Motorowy (Polish Motor Vehicle Association) by supporting its operations in classic car racing.

THE MISSION TO EDUCATE

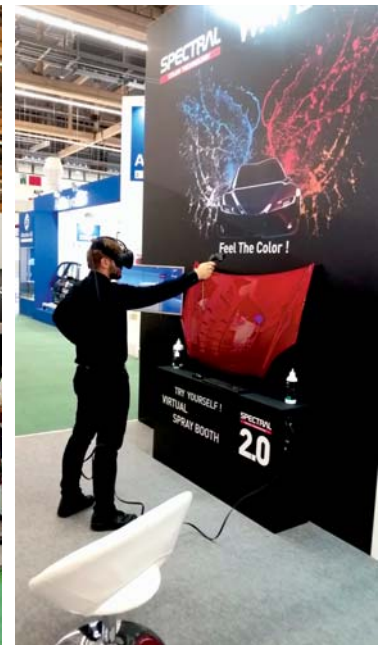

The NOVOL Academy supports professional and continuous education to align it better with the labour market demands. We help build the image and opportunities of car body painters. Each year, our Young Car Painters' Tournament is a test of knowledge and practical skills for the youth and a means to promote a professional to the trade. We support schools in the design and development of new learning faculties for future car body painters.

NOVOL at trade shows and fairs

NOVOL participates in prestigious trade shows and fairs across the globe every year. We travel to countries on all continents. You can find us at trade events in Frankfurt, Dubai, Beijing, Moscow, and Los Angeles, to name a few venues. NOVOL takes those opportunities to promote all products lines and features for specific and the most exacting markets.

MIERZĘCIN PALACE

**PAŁAC
MIERZĘCIN**
wellness & wine resort

This Neo-Gothic palace, purchased in 1998 in a nearly destroyed state, has been completely rebuilt; thus a true gem among monuments was saved. The palace park complex and the wine cellar are especially notable – thanks to renovation efforts, their former glory has been restored.
